

Inexpensive and Effective Bag Filter

For Removing Sediment or Undissolved Crystals When Dissolving SEA-90 for Foliar Spraying

Based upon very favorable ratings from our customers who dissolve SEA-90 for foliar spraying in large tanks, SeaAgri now recommends our customers contact Utah Biodiesel Supply (www.utahbiodieselsupply.com or 801-820-5753) and purchase their 7" x 16" 200 mesh bag filter. (When purchasing 10 they sell for \$3.50 each including shipping).

The bag can be hung from its strap directly above the opening in a spray tank and filled with 25 lbs SEA-90. Water is then added into the bag dissolving SEA-90 and catching any sediment and undissolved crystals. Two bags can be used in this process so one is always being filtered and no time is lost.

For Example: Pasture Application

200 gallon spray tank sprays out 20 gallons per acre.

5 lbs per acre SEA-90 is the desired application rate.

Fill 2 filter bags with 25 lbs each and run water through until 50 lbs are dissolved.

Fill tank to desired 200 gallon level and spray.
